Lahore

My aim is to achieve employment in an organization, where my skills will be enhanced. I also want to become a full stack developer and looking forward to work in a competitive environment that builds up my overall experience and learning.

EDUCATION

- **Bechalors In Software Engineeering**
University of Lahore

FINAL YEAR PROJECT

- **Patient Disease prediction using ML**
Project

Achievements/Tasks

- We developed a system that provides high accuracy to predict diseases. Our system uses different machine learning algorithms to predict diseases based on symptoms provided by patients or other users. Based on the symptoms of an individual, the diagnosis system gives the output as the disease that the individual might be suffering from. The disease can be predicted at home so if the disease can be predicted then early treatment can be given to the patients which can reduce the risk of life and save the life of patients and cost The Disease Prediction system has data sets collected from different health-related sites. With the assistance of a Disease Predictor, the client will want to know the likelihood of the illness with the given indications.

SKILLS

HTML CSS Javascript React Python
Flutter Firebase Bootstrap

PERSONAL PROJECTS

Company Portfolio landing page (05/2021 - 06/2021)

- • Developed a dynamic front-end using HTML, CSS, JavaScript and REACT
- It's a simple landing page website
